

Privacy Policy – SelfRace

Last updated: January 28, 2026

1. Overview

SelfRace is a personal training analytics application designed to help endurance athletes analyze their own training data and long-term performance trends. We respect user privacy and process personal data only to deliver analytics and coaching features requested by the user.

SelfRace is a private, self-comparison tool. There are no social features, leaderboards, or comparisons with other athletes.

2. Data We Collect & Legal Basis

By connecting your Strava account, you provide explicit consent for SelfRace to access and process the following data solely for training analytics purposes:

Data accessed from Strava:

- Activity Metrics: Distance, duration, sport type, pace, elevation gain, cadence, power, effort metrics, and timestamps.
- Physiological Performance Metrics: Heart rate and derived workload indicators used exclusively for performance and recovery analysis.
- Account Identifiers: Strava Athlete ID and email address (used only for authentication and account management via Supabase).

Data we do NOT use:

- We do not store or display precise GPS routes or location maps.
 - We do not process social data (followers, clubs, comments).
 - We do not access private messages or non-training-related content.
-

3. How We Use Your Data

Your data is used exclusively to:

- Calculate personal training metrics (e.g. training load, intensity distribution, weekly trends).

- Correlate Strava activity data with optional user-entered recovery inputs (HRV, sleep, notes).
- Generate private performance summaries and long-term insights.

Data Protection Principles:

- Private by Design: Your data is visible only to you.
 - No Sharing: Data is never shared with other users.
 - No Selling: We do not sell, rent, or monetize personal data.
 - Read-Only Access: SelfRace never modifies or writes data back to Strava.
-

4. AI & Automated Processing

SelfRace uses automated analysis (AI-assisted logic via private APIs) to generate training insights.

- User-Centric Processing: AI is used only to interpret the user's own statistics for their private dashboard.
 - No Model Training: User data is not used to train machine learning models.
 - Minimal Retention: Data sent for AI analysis is processed for real-time inference only and is not stored by the AI provider beyond the processing window, according to their published enterprise policies.
-

5. Data Storage & Retention

We apply a data-minimization and aggregation-first strategy.

Detailed Activity Data:

- Detailed Strava activity data is stored temporarily to support trend calculations and historical comparisons.
- Retention period: up to 90 days.

Aggregated & Derived Data:

- Long-term insights (e.g. weekly summaries) are stored only in aggregated form.
- Aggregated data cannot be reverse-engineered into individual activities.

Account Deletion & Disconnection:

- Users may disconnect Strava or delete their SelfRace account at any time.
 - Upon request, all detailed Strava activity data is permanently deleted within 24 hours.
-

6. Your Rights (GDPR)

If you are located in the EU, you have the right to:

- Access the data we store about you.
 - Request correction or deletion of your data.
 - Withdraw consent at any time by disconnecting Strava.
 - Request full account removal (“right to be forgotten”).
-

7. Third-Party Services

SelfRace relies on a limited set of trusted service providers:

- Strava API – activity data access based on user consent.
 - Supabase – authentication and secure data storage.
 - AI Providers (Enterprise APIs) – used only for private inference, with no training on user data.
-

8. Contact

If you have any questions about this Privacy Policy or your data, contact:
