

Privacy Policy – SelfRace

Last updated: October 6, 2026

1. Overview

SelfRace is a personal training analytics application designed to help endurance athletes analyze their own training data and long-term performance trends. We respect user privacy and process personal data only to deliver analytics and coaching features requested by the user.

SelfRace is a private, self-comparison tool. There are no social features, leaderboards, or comparisons with other athletes.

2. Data We Collect & Legal Basis

By connecting your Strava account, you provide explicit consent for SelfRace to access and process the following data solely for training analytics purposes:

Data accessed from Strava:

- **Activity Metrics:** Distance, duration, sport type, pace, elevation gain, cadence, power, effort metrics, and timestamps.
- **Physiological Performance Metrics:** Heart rate and derived workload indicators used exclusively for performance and recovery analysis.
- **Account Identifiers:** Strava Athlete ID and email address (used only for authentication and account management via Supabase).

Data we do NOT use:

- We do not store or display precise GPS routes or location maps.
- We do not process social data (followers, clubs, comments).
- We do not access private messages or non-training-related content.

Data from connected platforms and watches (optional):

These services are connected only at your explicit request and can be disconnected at any time.

- **intervals.icu:** Daily recovery data – HRV (overnight average), resting heart rate and sleep duration. Access via an API key you provide.
- **Garmin Connect (once the integration is available):** Activities, sleep, HRV and resting heart rate, based on your consent via Garmin (OAuth). If you enable it, we can

send planned workouts to your watch.

Data you enter yourself:

- **Recovery:** HRV, resting heart rate, sleep, factors (alcohol, caffeine, late meals) and notes.
- **Health records:** Injury, illness, fatigue and menstruation – so training can adapt to your condition.
- **Body composition:** Body scan data (e.g. InBody) that you upload or enter.
- **Profile and preferences:** Goals, races, available time and equipment, training settings.

Health data (special category under Art. 9 GDPR):

HRV, heart rate, sleep, health records and body composition are health data. We process them only based on your explicit consent, given by entering them or connecting a service, and only to personalise your training and feedback. You can withdraw consent at any time by disconnecting the service or deleting the data or your account.

3. How We Use Your Data

Your data is used exclusively to:

- Calculate personal training metrics (e.g. training load, intensity distribution, weekly trends).
- Correlate activity data with recovery and health data – entered manually or imported from connected platforms (HRV, sleep, resting heart rate, notes).
- Adapt the training plan and recommendations to your current condition.
- Generate private performance summaries and long-term insights.

Data Protection Principles:

- **Private by Design:** Your data is visible only to you.
 - **No Sharing:** Data is never shared with other users.
 - **No Selling:** We do not sell, rent, or monetize personal data.
 - **Read-Only Access:** SelfRace never modifies or writes data back to Strava or connected platforms. The only exception is sending a planned workout to your watch, if you explicitly enable it.
-

4. AI & Automated Processing

SelfRace uses automated analysis (AI-assisted logic via private APIs) to generate training insights.

- **User-Centric Processing:** AI is used only to interpret the user's own statistics for their private dashboard.
 - **No Model Training:** User data is not used to train global machine learning models. We exclusively use enterprise-grade API tiers.
 - **Minimal Retention:** Data sent for AI analysis is processed for real-time inference only and is not stored by the AI provider beyond the processing window.
-

5. Data Storage & Retention

We apply a data-minimization strategy to ensure compliance with Strava's platform policies.

Granular Activity Data (Streams, Laps, Splits):

- Detailed activity data is cached temporarily to support deep-dive analysis.
- Retention period: Automatically deleted after seven (7) days.

Activity Summaries & Trends:

- High-level activity metadata (summaries – date, sport, duration, distance, heart rate) is stored while your Strava account is connected and your SelfRace account is active. It is used for long-term trends (e.g. CTL/ATL, training streaks, monthly reviews). On first connection we import at most the last 12 months.
- Aggregated insights (e.g., weekly totals) are stored in a form that cannot be reverse-engineered into individual granular activities.

Account Disconnection & Deletion:

- **Recovery and health data:** Kept while you have an account, to track long-term trends (e.g. HRV baseline). We delete it earlier on request.
- **Disconnecting intervals.icu / Garmin:** Further imports stop immediately and the stored access (API key or token) is deleted. Recovery values already imported remain part of your log unless you request their deletion.
- **Disconnecting Strava:** If you disconnect your Strava account, all Strava-derived activity data and calculated metrics are immediately and permanently deleted from our servers. To protect API resources, a 24-hour cooldown period applies before reconnection is allowed.

- **Account Deletion:** Upon request to delete your SelfRace account, all data is purged immediately, with a 7-day grace period for account recovery before permanent removal of settings and preferences.
-

6. Your Rights (GDPR)

If you are located in the EU, you have the right to:

- Access the data we store about you.
 - Request correction or deletion of your data.
 - Withdraw consent at any time by disconnecting Strava or any other connected service.
 - Data portability – receive your data in a structured format.
 - Request full account removal (“right to be forgotten”).
-

7. Third-Party Services

SelfRace relies on a limited set of trusted service providers:

- **Strava API** – activity data access based on user consent.
- **intervals.icu** – importing recovery data from your watch, based on your consent.
- **Garmin Connect** (once the integration is available) – activities and recovery data, based on your consent.
- **Supabase** – authentication and secure data storage (database with row-level access control).
- **AI Providers (Enterprise APIs – Anthropic, Google, OpenAI)** – used only for private inference, with no training on user data.
- **Stripe** – subscription payment processing. We do not store payment card data.
- **Vercel, Railway** – hosting of the web application and server.

These providers process data only on our behalf and for the stated purpose. We do not sell data or provide it to third parties for their own purposes.

8. Contact

If you have any questions about this Privacy Policy or your data, contact:
